

“Organizations need to adapt quickly and redeploy. They need to ask, who do we have and who can learn the skills we need? We don't just need the skills, which are getting stale after 5-7 years. We need to know who can learn.”

Ashutosh Garg

Founder and CEO of Eightfold AI

Do you have the skills to adapt to the fast-changing job market? Ashutosh Garg, highlighted the challenges and promises of job opportunities with AI.

Key takeaways

👉 AI helps us to answer the key question of what can we learn. It also makes us to look at what we should be able to adapt to. Data science – one of the hottest fields in the market – is one example. This field provides professionals with a signal processing background or math majors with great job opportunities; they are phenomenal candidates for future functions in AI.

👉 In the world of work, we not only need the right legislation for the deployment of AI, but also good will. Companies hold responsibility how they use AI-based systems.

👉 AI is ultimately a human skill. To benefit best from AI tools, we need to build sound bridges between AI deployment and HR management.
